

BIESSE SHOWCASES CNC SOLUTIONS AT IWF

Biesse's exhibit will have something for all shops at IWF in Atlanta. But even more important, it's not just bigger, it's better. From one end to the other, we will have a wide range of CNC machines displayed. Everywhere you look, you'll see solutions designed to meet your production challenges head on. You may be wrestling with how to address current labor shortages, trying to find ways to produce more without increasing floor space, or working to minimize maintenance by choosing machines with standardized components to reduce your cost of ownership. In all those cases and more, Biesse has strategies to help you achieve your objectives now.

IWF 2022

& 7573**

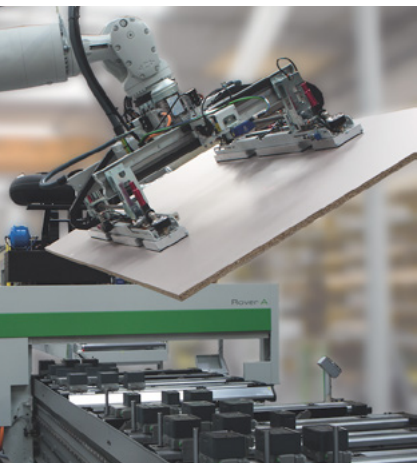

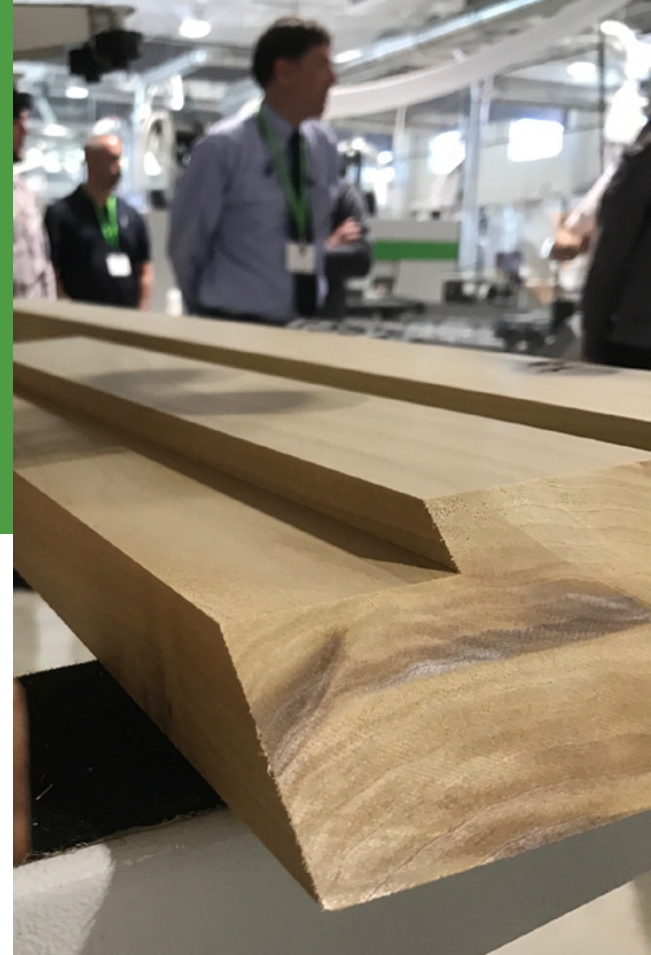

"If you think the Industry 4.0 concept is only a reality for big companies, spending time with Biesse will convince you otherwise," says Cesare Magnani, Biesse Brand Sales Manager. "There's no reason for small- and medium-sized companies to sit on the sidelines, especially when a shortage of skilled labor is impacting the industry as never before. The interconnectivity of Automation is for everyone."

a complete range of solutions

On the show floor in Atlanta this year, you'll see a variety of CNC machines displayed at IWF, covering a complete range of solutions and applications. You can experience fully integrated solutions or single machines ready to connect easily and successfully to additional production machinery, as well as vertical CNCs, five-axis machines, CNC routers and flexible drilling solutions. "In addition to watching how new machines and integrated solutions can change the way you work, you will be able to interact with experts who are dedicated to working with you to find the best, most efficient way to reach your production targets," Magnani says.

Biesse has always been known for introducing cutting-edge technology and exclusive innovation. This year is no exception. At IWF, new applications you'll see in our booth include completely automated panel

processing solutions with demonstrations of automatic kitting of components via a robot placed at the end of a nesting cell. Although similar applications have been introduced elsewhere in the past, it's clear that Biesse has greatly enhanced operational efficiency to create a true production solution.

What not to miss

Stop by and see why Biesse's **T-Jet Dust Mitigation System** is a finalist for this year's Challenger Award at IWF. The T-Jet Dust strategically directs compressed air inside the cut line of nested based manufacturing to dramatically improve dust collection, providing a cleaner, safer and more efficient nesting process. Less time spent cleaning the machine improves operator efficiency by reallocating that skilled labor.

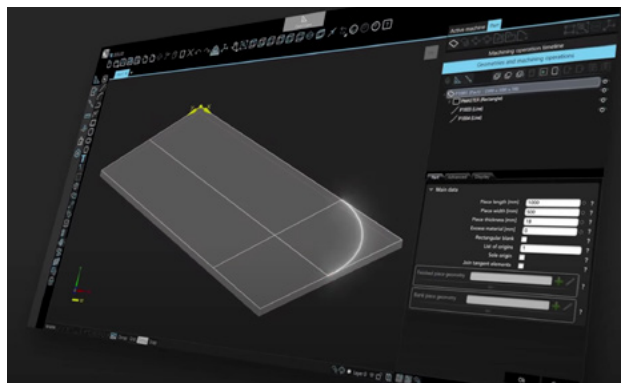

Watch the video

Don't miss learning about how the **SOPHIA IoT** continuously accumulates, monitors and analyzes a machine's vitals via a cloud-based network on a real-time basis. A customer can easily access this information through a mobile app, and both the customer and Biesse's service team receive an alert when there's an abnormality. Together, with SOPHIA's predictive technology, they can quickly decide what needs to be done to avoid a potential problem that could result in machine downtime.

Software to simplify the process

▶ Biesse's CNC machines at the show will be equipped with the new **B_SOLID 4.0 software**. Powerful and easy-to-use, this enhanced software application with B_NEST reaffirms Biesse's leadership position among CAD/CAM for CNC. It is fully integrated with the machine controller to provide a superior level of control.

▶ Want to know how to streamline the management of your shop in a simple and user-friendly manner? Let us introduce you to **Smart Connection**, Biesse's new software package that connects your office to the shop floor. Smart Connection utilizes real-time data to give you 360-degree management of scheduling and tracking your production in just a few simple and intuitive steps. Experience the software firsthand through two work cells set up in our booth and let us demonstrate how Smart Connection can connect your machines and transform your production in the Industry 4.0 direction.
